

■ New Magicut Series

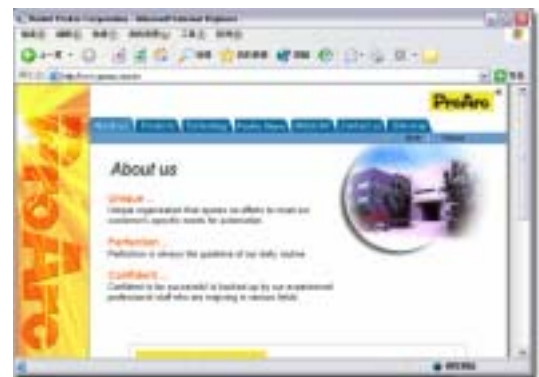

Now, ProArc offers an economic and compact version of cutting solution while maintaining high quality cuts. It is specially designed for machine shop where limit budget and space is available. Magicut series has the choice of 4', 5', 6' in cutting widths and its compact designed can be easily installed. The brushless AC servomotor, advance PC-base CNC controller, Windows XP operating system and color LCD screen are standard features. It's easy to save individual

program files to CNC to resolve conventional optically traced cutting system's inconvenient paper drawing storage problem. To find out more, contact us today.

■ ProArc's New Homepage

We are pleased to announce that a major change has taken place in ProArc's homepage. You will note that 2003 was a year of rewarding transformation in ProArc. New information will continuously be added or updated in the year to come. You are encouraged to click our new web-page at www.proarc.com.tw. We hope you will find the information accessible, informative and valuable. All comments to the change of its format or its contents are mostly welcome.

■ Two (2) Years Warranty – E.Z.Arc Welding System

ProArc E.Z.Arc series has been matured in the market. We believe the price and the quality is reasonable. It has been well known and popularly accepted in the automatic welding industry. Through our innovative design and strict component selection, we are confident with its excellent quality. We would like to announce that for products such as PT-100/200 Positioners, TR-0100/3504 Turning Rolls and E.Z.Arc welding accessories (ref. Cat. No: SD-417AE)

that are shipped beginning January 1, 2004 will now receive 2 years warranty from date of shipment.

■ Laser Welding with Robot

Introducing an efficient peripheral system with a right robot is essential to obtain the optimum performance. *ProArc* offers Robot Standard Package that integrates plasma or laser welding process using *Fanuc* robot systems. Our customers use the package in the manufacture of golf club head, mobile phone are among the few examples of its broad applications. The standard packages can be configured to suit your specific needs. We design and supply the system with various types of precise manipulators, positioners, linear slides etc. and with flexibility to fit customer's particular applications.

■ “Life Exploration” - Lin, Liang-Tsai’s Metal Sculpture Show at NCU Art Center

Mr. Lin, Liang-Tsai, a metal sculpture artist, had just completed a personal show titled “Life Exploration” held this December 9 ~ 28, 2003 at the National Central University Art Center (NCU Art Center) in Taiwan. It was the first time Mr. Lin presented his creation of mainly large-scale sculptures to demonstrate his transcend in progress with build-in personality. While Mr. Lin’s creating the sculptures, western style artistic architecture, geometry and principle of equilibrium were constructed in his creations, an additional infusion of oriental culture and fine art intensified its reconciliation just like the power translating from Chinese ancient calligraphy. The power and beauty between the virtual and reality are the endless sources of inspiration to Mr. Lin in creation.
