

## 1 ProArc new product launch

2020 was a remarkably difficult year, people all over the world were forced to contend with a new normal life. We have to stop our business visiting plan and cancel all the exhibition due to travel bans.

No matter how bad the 2020 is, we grab this opportunity to optimize our production processes and develop several new products.

ProArc will release following new products in 2021:

**NEW**  
Products

WO-150 Oscillator  
\* Easy  
\* Strong  
\* Reliable

- A. Pendulum weaver (oscillator) for MIG/MAG welding
- B. Arc Voltage Control (AVC) for AC/DC TIG & Plasma welding
- C. Precision Circumferential Welding Lathe
- D. New torch stand for positioner and turning rolls
- E. New X-cut bevel head for plasma cutting
- F. Upgraded control system for Master CNC cutting machine
- G. Upgraded ServoArc positioner
- H. Laser welding turnkey solution for seam welding
- I. IHT automatic oxyfuel cutting process for Master series.

## 2 Protecting workers' health

It has been 27 years since the first CNC cutting machine PC-3100GS was sold in November, 1994. Due to the popularization of high precision plasma cutting in the world, customer cut thicker plate by high current power source. The fume produced by plasma cutting is a hidden danger in our working environment that can hurt worker's health. The only way to prevent this problem is to equip machine with fume extractors.

ProArc has been dedicated to the design of the cutting table for over ten years. Our purpose is not just building an extraction table to collect the fume, but overcome the difficulty of handling high temperature dust and massive residue. We offer one-stop shop service that provide the total cutting solution includes the track base foundation, sequential zone downdraft table and dust collector to create a good environment for customers.

ProArc Dust Collector

Contact us for more information of "Easy clean", High efficiency fume collecting" and "long-life" downdraft plasma table.
